

The teaching philosophy of Dr. Steven R. Sartori

One of my major goals for all of my classes is to relate my industry experience and life lessons to my students. I believe that by showing a connection between what we learn in school and how those concepts will be an important element in their future is essential for a meaningful education.

Through the constructivist approach, I create lessons that actively engage students in problem solving applications. These challenges lead to meaningful discussions, higher-level thinking activities, and development of critical thinking skills.

These hands-on lessons create a learning environment that is exciting; they encourage students to take risks in their learning, and become independent thinkers.

My goal is to improve student achievement by implementing lessons that challenge all students. It is my intention that students will not only apply the concepts developed in my class but, use the skills developed in science, mathematics, English, and social studies to better understand and connect the concepts of all subjects.

Finally, as a student of education I believe that I must be a life-long learner. Through professional activities, continuing education, and teacher

relationships I will be able to continue to create a learning environment that is fresh, current, and provides me the opportunity to continuously improve my teaching skills.
